

NICKOLAS STURGEON

nasturgeon691@gmail.com • linkedin.com/in/nickolas-sturgeon • github.com/redbeard691 • nicksturgeon.com

PROFESSIONAL SUMMARY

Results-driven software engineer skilled in full-stack development, AI/ML solutions, and Agile methodologies. Adept at delivering impactful software applications, resolving technical challenges, and collaborating cross-functionally to build reliable solutions for real-world problems.

CORE SKILLS

Programming Languages & Frameworks: C#, Python, C++, Haskell, JavaScript, HTML, CSS, Node.js

Software Development & Architecture: Software Development, Software Architecture, Agile

Testing & Quality Assurance: NUnit, Testing, Debugging

Database Management: SQL, PostgreSQL

Tools & Version Control: Visual Studio, Git

CERTIFICATIONS

- AWS Certified Solutions Architect (In-Progress) - Amazon Web Services
- Google Cybersecurity Professional Certificate (In-Progress) - Coursera

EDUCATION

Washington State University, Everett, WA, USA | 2025

Bachelor of Science in Software Engineering with a Minor in Math

WORK EXPERIENCE

PipeFitter Helper App. | 2024–Present | *Lead Developer/Founder*

- Architecting a cross-platform mobile application using C# and .Net MAUI, enabling pipe fabricators to generate precision templates for complex geometry.
- Developing custom trigonometric algorithms to translate 3D fabrication requirements into 2D flat-pattern layouts with no need for internet connection.
- Managing the full development lifecycle, from initial requirement gathering with trade professionals to iterative UI prototyping and performance testing.
- Designing a high-efficiency interface optimized for the "on-site work pace," focusing on high-contrast visuals and minimized input steps for use in high-pressure field conditions.
- Implementation of a CI/CD pipeline using GitHub Actions to automate build and testing cycles, ensuring that critical geometric calculation engines are validated through automated unit tests on every commit.

Boeing Scholarship Program | 2024–2025 | *Software Developer*

- Developed an algorithm reducing outlier detection time by 20%, processing data from over 20 sensors per test
- Achieved 80% accuracy detecting outlier data during wind tunnel tests
- Led architectural decision to use C# and integrated Python for Tensorflow-based AutoEncoder model, enhancing scalability and AI capabilities
- Collaborated with Boeing engineers to integrate feedback and ensure compliance with testing standards
- Designed UI for the Boeing Project as part of front-end development
- Applied debugging techniques to identify and resolve coding problems during development
- Served as Agile team lead for a group of five cross-functional team members.

Cobalt Enterprises | 2016–2019 | *CNC Machinist*

- Collaborated with teams to deliver aerospace projects for Boeing and DoD clients precisely to technical specifications within tight production schedules.
- Resolved complex technical challenges with limited resources to minimize downtime and ensure critical project deadlines were met.
- Demonstrated critical thinking and adaptability by innovating technical solutions for equipment repair and project deviations.
